

Roamer 160 SMART 3

12.8V 160AH 200A LiFePO4

The Roamer 160SMART3 is a compact replacement for larger equivalent-power lead acid leisure batteries. Intended for low-demand applications it can deliver a significant space, weight, and energy storage improvements when used as a drop-in replacement for a 160Ah lead acid, AGM or gel battery.

General Description

All Roamer batteries utilise Lithium Iron Phosphate (LFP or LiFePO4) cell chemistry combined with an intelligent, wireless connected Battery Management System (BMS). Roamer only use Grade A cells direct from the manufacturer, matched at the factory to ensure coherent operation and maximise service life and safety. The batteries are constructed around a custom fabricated steel chassis which supports and protects the cells from mechanical impacts and vibration and facilitates high levels of serviceability, ensuring that our batteries can be upgraded or serviced to maximise the service of the product.

Fire retardant materials including fibreglass resin panels and high-density carbon-impregnated EVA foam are used to provide high quality electrical and thermal insulation, and mechanical protection. All batteries are fitted with female M8x1.25 terminals with large contact surface area. All batteries have multi-layered safety features as standard including over and under voltage, over and under temperature for both charge and discharge, short circuit detection, cell balance monitoring and more. High specification components are used to provide passive protection from accidental extremely DC overvoltage, reverse polarity, and momentary overcurrent.

PRODUCT FEATURES

- 160Ah capacity at 12.8V.
- Intelligent cell balancing up to 3A.
- Grade A EVE Prismatic LFP cells.
- Up to 160A continuous discharge (2kW).
- Supports up to 2 batteries in series and 4 batteries in parallel for increased capacity, current delivery, voltage, or supply redundancy.
- Discharge between -20 °C and 60 °C, charge between 0 °C and 60 °C.

Battery Dimensions

Unless otherwise indicated all linear dimensions are provided in mm and all angular dimensions are in degrees. Dimensions subject to manufacturing variation. Products may vary from those illustrated. This drawing is subject to change without notice.

Battery Characteristics

The following graphs demonstrate the operational characteristics of LiFePo4 cells under a variety of conditions. Many factors play a role in the exact capacity, performance, lifetime and safety of a lithium battery so every installation varies depending on the exact setup and use case. These serve only as a guide and do not reflect the exact characteristics of any individual battery.

TYPICAL CHARGE & DISCHARGE VOLTAGE VS CHARGE STATE (SoC) CURVE OF A LiFePO₄ CELL (25 °C)

TYPICAL USABLE CAPACITY VS CYCLE LIFE FOR DIFFERENT DEPTHS OF DISCHARGE (0.5C, 25 °C)

CELL VOLTAGE VS STATE OF CHARGE AT DIFFERENT CHARGE RATES (25 °C)

CELL VOLTAGE VS STATE OF CHARGE AT DIFFERENT DISCHARGE RATES (25 °C)

CELL VOLTAGE VS STATE OF CHARGE AT DIFFERENT TEMPERATURES

TYPICAL EFFECTIVE USABLE CAPACITY VS CELL TEMPERATURE
